VISALIA, CALIFORNIA 93277

Gentlemen:

California Senate Resolution 202 of 1971 authorized the Tulare County Planning Department to prepare an environmental management program which would have application on a Statewide basis. This Environmental Resources Directory was developed as part of the series of environmental documents which this Department has produced as authorized by that resolution.

This Directory provides two valuable devices for use by governmental agencies, citizen organizations and the general public.

1. The Directory itself: A comprehensive compilation of Federal, State and local agencies and organizations who have either jurisdiction over or information on environmental resources.
2. The Environmental Review System: A system for reviewing the environmental impact of individual development activities upon specific environmental resources.

The first device, the Directory, may be used in a way similar to a dictionary or other structured lists. The second, the Environmental Review System, is simple, quick to use, and comprehensive. Provided as a component of the Review System is a Resource/Activity checklist which allows the user to rate the relative impact of a particular development activity on Environmental Resources while identifying Federal, State and local agencies who can provide either detailed information or jurisdiction over that particular resource.

This publication is a working tool to be used in daily administration as well as formulation of long term policy decisions related to public environmental resource management activities.

We hope you will find this Directory to be a valuable tool in your efforts in the maturing practice of public environmental resource management activities.

Sincerely,

TULARE COUNTY PLANNING DEPARTMENT

# **The Environmental Categories Review System**

## FORWARD

Tulare County is an ideal example of a nearly complete range of ecosystems and problems imposed by the pressures of urbanization, recreation-oriented development and competition for the management and use of natural resources. Only the coastal and ocean environment is missing. Further, Tulare County is one of the most agricultural counties in the nation.

Early in 1971, the Tulare County Planning Department developed a prospectus setting forth the rationale for using Tulare County's comprehensive planning program as a vehicle for developing and testing guidelines and environmental information systems which would have application for other counties as well. In August of 1971, the California State Legislature passed Senate Resolution 202, which authorized the organization of a Federal and State Task Force to work with the County in preparing guidelines and environmental informational sources for application on a State-wide basis.

This Directory is one of a series of innovative documents, related to environmental issues which Tulare County has, and will produce, as a result of Senate Resolution 202. The Environmental Categories Review System provides a simple method for collection of pertinent environmental information by governmental agencies, interested citizens and professional organizations, and by those who are assessing the impact of development activities upon environmental resources.

---

This document was prepared with technical assistance from the Council on Intergovernmental Relations utilizing a Comprehensive Planning Assistance Grant from the U.S. Department of Housing and Urban Development under the provisions of Sec. 701 of the Housing Act of 1959 as amended. (CPA/1020.19)

## I. INTRODUCTION

Full knowledge of the long-term and interlocking effects of man's activities, sometimes destructive, have never been known. Only recently, when enough people began to realize the limitations of their planet, has the environment become a positive political issue. In reaction, legislators have begun to mandate forethought prior to development of land, in order that all environmental ramifications of any individual development will be identified before natural resources are committed. The process of identifying environmental effects (through use of the Environmental Impact Report) are rather vague and inconsistent from one governmental area (city, county or region) to another.

The Resources Agency of California has provided E.I.R. Guidelines for all local governmental agencies throughout the State. These guidelines, by themselves, can not assure that each area throughout California will receive equal analysis and protection from long-term damaging environmental effects. A system by which environmental information can be disseminated is vital. In order to support local environmental policies, related data should be easily identified and quickly obtainable. To approach this need, Tulare County has developed the Environmental Categories Review System (E.C.R.S.) which identifies the chain of decisions made by local environmental review agencies and provides a simple procedure for broadening the data base upon which local agencies make environmental impact reports.

## II. INFORMATION LEVEL ANALYSIS

There is a vast amount of general environmental information available to local reviewing agencies. General information includes basic environmental categories (Level 1: see Diagram II-A) identified in the Environmental Resource Management Element Guidelines (developed by Tulare County and distributed by the State of California).

More specific environmental resources (Level 2: see Diagram II-A) are identified by recent California Resources Agency Guidelines for E.I.R. review procedures.

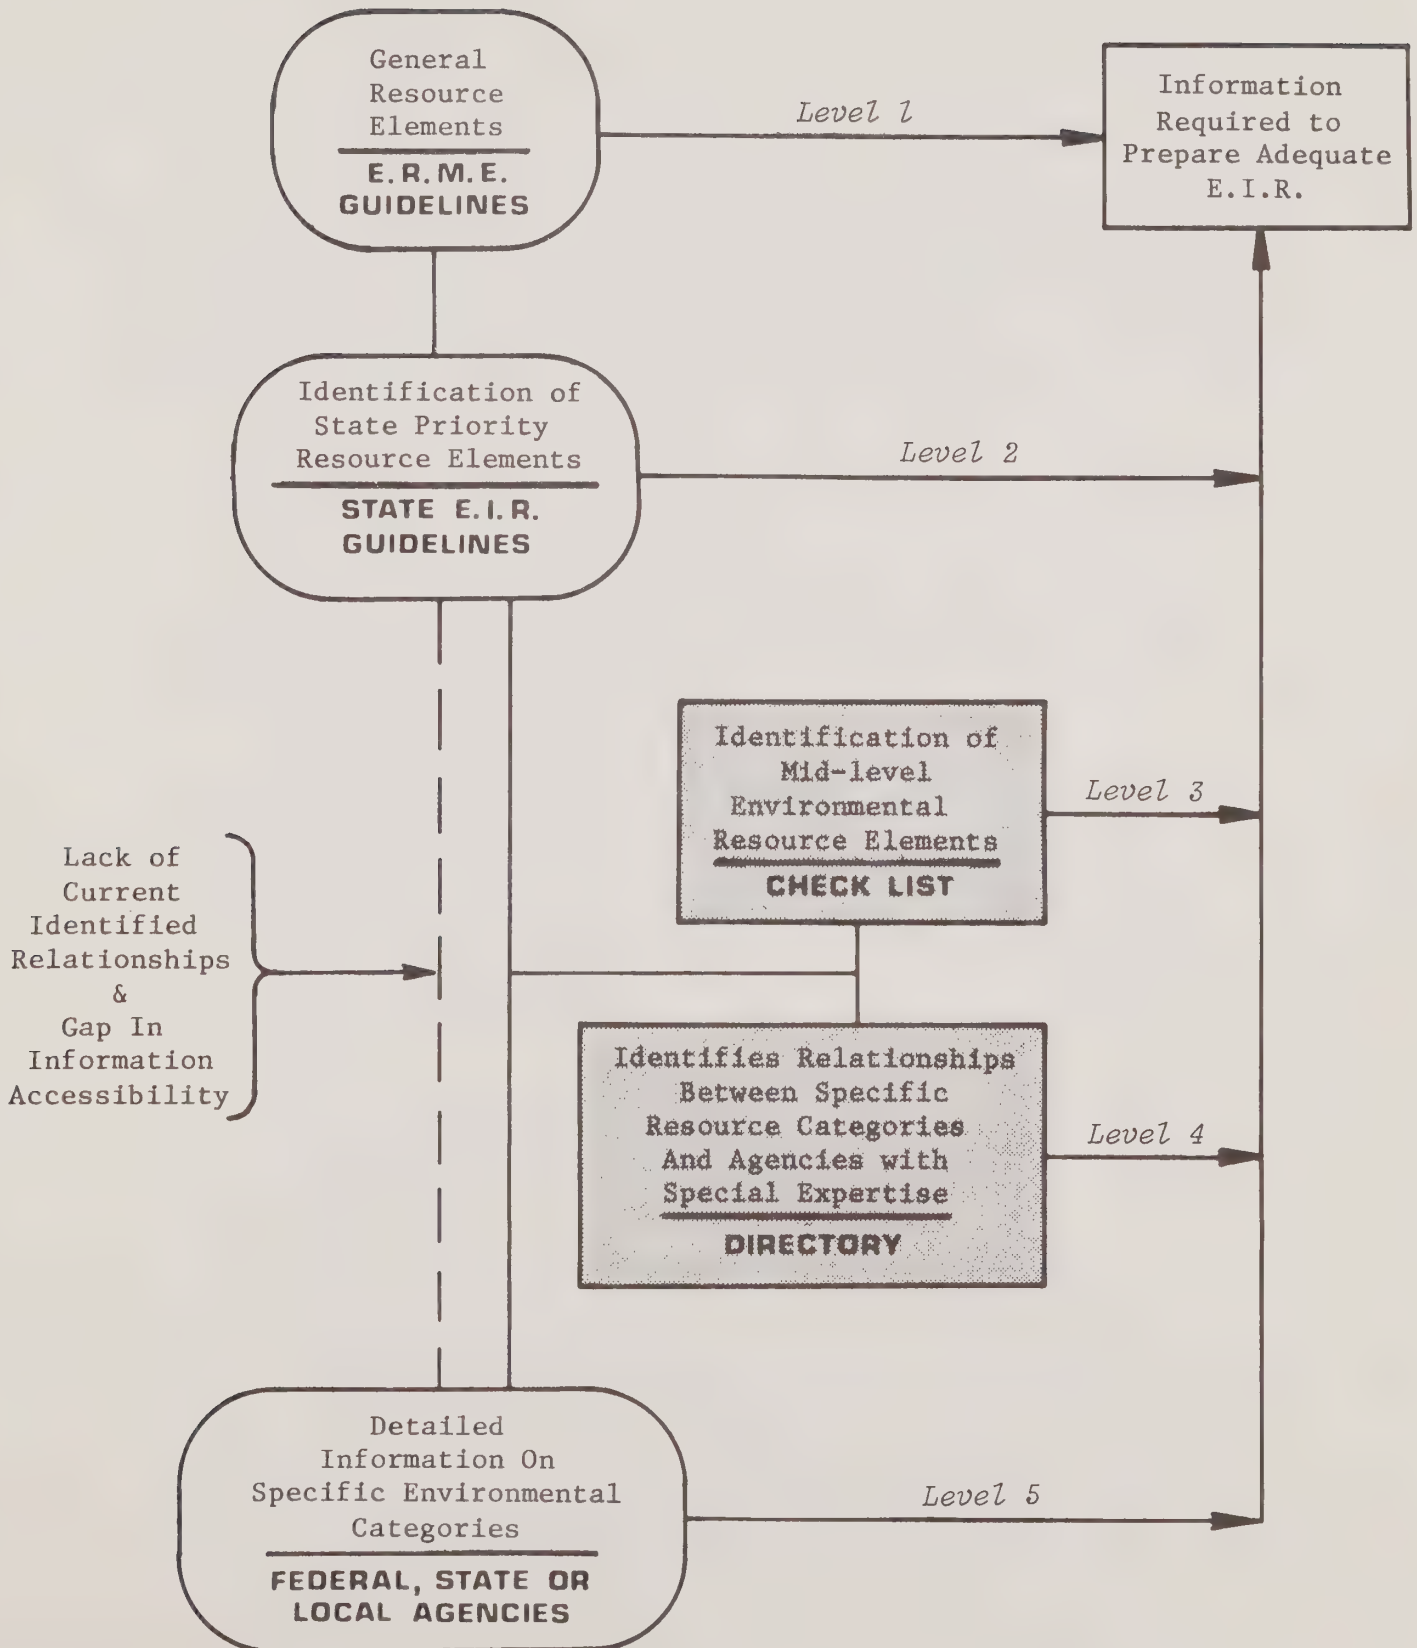

The next level of information available, but not necessarily accessible, is specific environmental resource information collected, maintained and updated by diffused Federal, State and local agencies (Level 5: see Diagram II-A).

Unfortunately, there is no link between the general information levels and the specific ones. This gap in information communications limits the environmental review effort. If we, as managers of our environment, truly wish to protect it from detrimental human activities, then decisions made regarding the potential impact of such activities must be supported by a complete data base. The base is there, we only have to provide the bridge. The E.C.R.S. provides the system necessary to bridge the gap between information levels two and five; to connect the general and specific levels.

### III. E.C.R.S. TOOLS

#### First Tool (Level "3" Information) (Resource/Activity Checklist)

Each Governmental Organization provides varying levels of environmental impact analysis depending upon the expertise and capabilities of the reviewing staff. A uniform system of analysis should be adopted to approach equal protection of all environmental resources. The resource/activity checklist provides such a method for promoting consistency in environmental review by various governmental agencies.\*

It is comprised of four principal sections:

1. Environmental Data Categories are listed along the left side of the checklist. They represent a complete range of mid-level environmental considerations. The five basic elements are identified as (1) Biological Resources; (2) Climatic and Air Resources; (3) Energy Resources; (4) Land Resources; and (5) Water Resources.

Listed under each of these five basic elements are secondary and tertiary environmental considerations which provide a total range of data categories. The Environmental Data Categories are constants and should not be subject to change by local reviewing agencies. That consistency can promote uniformity between agencies using the E.C.R.S. for reviewing the environmental impact of potential developments. This will help to provide more uniform decisions for protection of environmental resources.

The Data Categories also represent a component of the third level of information, the first of two pieces required to bridge the information gap between local reviewing agencies and governmental information sources.

2. Development Activities are listed across the top of the checklist. They are the specific types of development or land use proposals which are typically processed by a local environmental review agency. The local reviewing agency has, at this point, flexibility in determining which types of development activities are to be listed. Therefore, on the checklist, the "Development Activity" column has been left blank to allow local agencies to fill in those activities for which they require environmental impact reports. An example of the types of activities which could be listed can be found in Table III-A.

\*A blank Checklist is in the pouch inside the back cover.

3. The Rating System is a process for identifying the tolerance of individual environmental considerations when that system is impacted by specific development activities. The rating system identifies which elements are of highest priority for analysis by indicating (1) high priority for analysis; (2) medium priority for analysis; or (3) low priority for analysis (see Diagram III-B).

Some ratings are also circled, (Example ①, ②, or ③ ) which indicates that the analysis is dependent upon the physical location of the proposed use. (Example: Forest projects)

The rating system serves two useful and necessary functions.

A. FLEXIBILITY RELATED TO LOCAL SYSTEMS.

Every reviewing agency analyses environmental impact on a variety of unique environmental ecosystems; thus priorities will vary with location. The flexibility provided here for local choice in rating impact allows local environmental policies to be reflected in the checklist procedure, thus aiding in implementation of local land use policies.

B. FLEXIBILITY RELATED TO IMPORTANCE OF SYSTEM.

Rating the effects of development activities on specific resource categories gives the reviewer an indication of which categories are of greatest importance so that if time limitations are restrictive, the reviewer can allocate time to the most critical issues. There will also be a multitude of different types of development proposals which will be reviewed by any one agency, some of which will impact the environment to a greater degree than others. Should a development be proposed of significant importance (such as the Disney Inc. proposal for the development of Mineral King in Tulare County), then the reviewer would analyze ratings 1, 2 and 3 to assure a total researching of the potential environmental impact. On proposals of lesser significance, the reviewer may choose to use rating 1 only.

RELATING CHECKLIST TO DIRECTORY (Tool 1 to Tool 2)

4. The Directory Reference functions as the link between information level 3 (see Diagram II-A) and levels 4 and 5. The reference is located adjacent to the Environmental Data Category and is keyed into the matrix to direct the reviewer to higher information levels within the Environmental Resources Directory. The number within the Directory reference column indicates the page upon which identification of Federal, State and local organizations who have jurisdiction or information on that particular environmental category can be found within the Directory itself.

#### IV. SUMMARY

When the local reviewing agency has completed the checklist to reflect local needs, the environmental reviewing personnel can follow the process identified in Diagram IV-A (ECSR Procedure) toward preparing an environmental impact report.

That Environmental Categories Review System (E.C.R.S.) will serve as a valuable tool in assessing the future environmental impact of development activities, and broaden the data base upon which decisions are made.

## DESCRIPTION OF SUBJECT CATEGORY SECTION

The Environmental Subject categories are broken down into five main resource areas:

1. Biological.
2. Climate and Air.
3. Energy.
4. Land.
5. Water.

Each of the five major categories has secondary environmental considerations which are listed alphabetically and correspond to the listing on the check list. The agencies and organizations who provide jurisdiction or information related to that particular environmental consideration are listed under either Federal agencies and National organizations; State agencies and organizations; or local agencies, organizations and special districts.

Once the appropriate agencies have been identified within the *subject* section, the user should turn to the *Organization* Section of the *Directory* to find detailed information regarding the specific areas of interest of those agencies and the agency address.

For simplicity, those agency or organization categories which had no primary interest under any specific subject, were omitted.

# **Environmental Agencies and Organizations**

## DESCRIPTION OF ORGANIZATION SECTION

The Organization Section of the Directory is divided into three main sub-categories:

1. Federal Agencies and National Organizations.
2. State Agencies and Organizations.
3. Local Agencies, Organizations and Special Districts.

Within each of these three sub-categories there is a listing of agencies in alphabetical order. To facilitate simplicity in Statewide use, the regional addresses of National agencies and headquarters addresses of State agencies have been included. The local branch office addresses which are applicable to Tulare County are listed under the agency name. Specific areas of interest, which indicate whether an agency has jurisdiction or information on any specific environmental consideration, are also listed under the agency name within the *Organization* Section of the Directory. The areas of interest descriptions were compiled through the accumulation of information from questionnaires distributed at the onset of this project as well as an accumulation of agency descriptions documented in numerous governmental directories throughout California and the nation. In many instances the areas of interest have been condensed so as to represent only the primary functions or interests of any one agency or organization, thus facilitating quick review.

Should the user of the E.C.R.S. require detailed information which is not provided within the area of interest identification, then other directories\* which provide information on agencies can be substituted for the Organization Section of this report.
